

EM 700 Plexi

Effective plexiglass antenna

EM labels are thin and can be deactivated and reactivated. This makes them ideal for environments where the same item is being regularly scanned in and out, such as libraries and film rental stores.

Even metal articles are easy to secure with EM labels. They can be placed onto or into metal articles and are widely used in hardware and multimedia stores.

The EM 700 Plexi antenna has the ability to detect labels shielded by aluminium foil or placed into shopping carts.

Specifications

Features

- Electromagnetic system (EM)
- Transparent modern design
- Labels can be activated and reactivated
- Environmentally friendly

Antenna

- Width.....730 mm
- Height.....1506 mm
- Thickness.....20 mm
- Thickness at base.....96 mm
- Weight.....32 kg

Add-ons

- Protection buffers

Approvals

- CE, FCC, ETL

Transmitter

- Operating frequency.....366/488Hz

Environmental

- Ambient temperature.....0°C to 50°C
(32°F to > 122°F)
- Relative humidity.....0 to 90%
Non-condensing

Alarm

- Audio level (adjustable).....95dBA

Controller box specifications

- Powers up to 3 EM Antennas
- Quick and easy mounting
- 120V, 230V versions available
- Power consumption 90W (3 antennas)
